The general purpose of the Statewide Stroke System rules describes the process of stroke program verification and designation; triage and transport and transfer; system evaluation; data collection; stroke registry establishment; and stroke performance improvement. The requested rules will provide structure, clarity, and detail to operationalize the existing boilerplate language that briefly outlines the system. They represent a stakeholder supported approach to system development that is practical, needed and designed to optimize quality care and positive outcomes for Michigan residents who have had a stroke.

The proposed rules will provide structure, clarity, and detail to operationalize the existing budgetary language and represent a stakeholder supported approach to system development that is practical, needed and designed to optimize quality care and positive outcomes for Michigan residents who have had a STEMI.
